Monefy app automation challenge

Tester: Tammam Abou Rshaid
Date: 12.12.2020

Introduction about the App:
Monefy is a money management app where you can add your expenses in a dedicated category and track your spending's. You can review your expenses in detailed charts

Task 1

1) Exploratory testing charters

1- Explore balance with inserting (150 $) to discover the amount of balance is changed and added the Income.
2- Explore balance with inserting (50 $) of Bills expense to dicover the balance is reduced to (100 $).
3- Explore balance with inserting (80 $) of Food expense to discover the balance is reducerd to (20 $).
4- Explore Percentage of Food expence with mathamtic eqution (Percentage = Food expense / The Amount withdrawn) to discover Percentage of the Food is correct.
5- Explore balance with delete Food expense (80 $) to discover the amount of the balance is changed to (100 $)

2) Findings from charters

Yes, all assertions have passed as expected.

3) Prioritization of those charters

1- I explore the Income first with insert an amount (150 $), while the balance was ZERO (First use of the APP).

2- then explore how total balance is change, and how correctly calculate expenses.

3- Check the percentage of an expense by divided expense amount on amount withdrawn.

4- Delete an expense to check total balance has reduce this expense.

4) Time planned for each charter

Charter (1) = 10 minutes
Charter (2) = 10 minutes
Charter (3) = 10 minutes
Charter (4) = 5 minutes
Charter (5) = 10 minutes

5) What kind of risks need to mitigate for this type of application?

Reduce Risk , a level at which risk is acceptable.
